

VBA for Excel Course

A 5 Star rated course from the Training experts

VBA for Excel Course

Learn VBA for Excel, build practical macros, and streamline business workflows with this 5 star rated practical VBA Training

Introduction

On this Introduction to VBA course, you'll learn how to write macros, manipulate data programmatically, and create solutions that work exactly the way your business needs.

This Excel VBA Course is practical and results-focused. By the end of the day, you'll have created automation solutions you can apply immediately, gaining confidence to learn VBA further and expand your capabilities.

Who would benefit from this course?

If you regularly perform repetitive tasks or manage complex spreadsheets, this course will show you how to automate processes, reduce errors, and streamline workflows.

Private & One to One courses

We offer private group courses and one-to-one courses Online from £550 (full day).

Please email or call us with your preferred venue, number of delegates and any requests.

Designed for professionals and business users who are already confident with Excel but are new to VBA.

Classroom & Online Courses

We offer this course as a live, interactive online course.

Our online courses are available for people anywhere in the world with internet access.

Detailed Course Materials

Our interactive practical courses and learner centred approach, combined with small class sizes, provides the very best learning environment

Google

5.0 ★★★★★

I found the course very informative and thorough and have put my learnings to immediate use.

Having a small number in the class helped. The course covered everything I wanted to know and will certainly save me some hours going forward.

VBA

Course Outline

Introduction to VBA in Excel

- Understand what VBA is and how it extends Excel's capabilities
- Learn the benefits of automating repetitive
- Excel tasks
- Explore the VBA Editor and its key tools
- Record, run, and edit your first macro

User Interaction and Control

- Display custom messages with MsgBox
- Capture user input using InputBox
- Create interactive macros that respond to user actions

Using the Macro Recorder

- Record tasks and review the generated VBA code

- Modify recorded macros for flexibility and efficiency
- Learn how recorded code helps you understand VBA structure

Debugging and Error Handling

- Identify and fix common VBA errors
- Use debugging tools such as breakpoints and the Immediate Window
- Apply basic error-handling techniques to make code more reliable

Programming Fundamentals

- Work with variables, data types, and operators
- Build loops and apply decision-making logic (If, For, Do While)
- Understand Excel objects, properties, and methods

- Write code to manipulate cells, ranges, and worksheets

Practical Automation Projects

- Automate repetitive workflows and reports
- Standardise data entry and formatting tasks
- Build reusable tools to improve team productivity

Best Practices in VBA

- Write clean, readable, and maintainable code
- Follow structure and naming conventions for clarity
- Test, refine, and document your macros effectively

5.0 ★★★★★

Everyone found the course to be very useful and have learnt lots of new ways of using Excel.
